## *GPS Medical Alert Basic System*

This system uses GPS and cellular phone technology to provide one button access to emergency help. The main advantage of these GPS medical alert systems is that they allow seniors greater freedom as they can call for help anytime and from anywhere. An emergency button quickly connects individuals with an emergency care center using two-way voice technology.

## *GPS Medical Alert System with Telehealth*

This device is classified as a "Personal Health Gateway" as it not only offers mobile medical monitoring anywhere in the United States, but it also integrates a variety of Telehealth and safety features in a small mobile device. This unit can connect through Bluetooth with your existing Telehealth system and send readings directly to your healthcare team.
